Semester/Section: A2

OBJECTIVE:

DOOM EXPLODER is an action packed shooting based arcade game. Here player will be given control of a spaceship which can be controlled to shoot and destroy asteroids. It is design and developed for casual gamers aged 10 to 25 to make them pleased.

INTRODUCTION:

We are inspired by Gunship Strike Shooting game to develop this game. And the lab knowledge of Software Development–I is motivated us to undertake this project. A small description is given bellow of the game...

Player & Characters:

It's a single player (1P) game. The game will have two main spaceship. The player will be given the freedom to choose any of them.

Gameplay:

The spaceship will be placed at the middle of the screen at a static position. Player can use the keys (like W, A, S, D) to change the direction of the shooting. They will use the space bar to shoot. The big asteroids will sometimes break into smaller ones after getting destroyed.

Difficulty Level:

Player can choose between two difficulty levels. A harder game mode will result in more scores than the easier mode.

Level Design:

There will be 3 main levels in the game. Each will have different backgrounds difficulties.

✚ Scoring System:

Player will have infinite bullets to shoot. There will be a missile gauge as well. The missile gauge will cost 40% life of the spaceship.

✚ Game Over:

If the player dies at a certain level, then he will have to start from that level all over again. Meaning his health will be max again. In level 1, the scores will reset as well.

After the game is over, the Game Over screen will pop up and the player will be sent to the main menu.

GAME VIEWS:

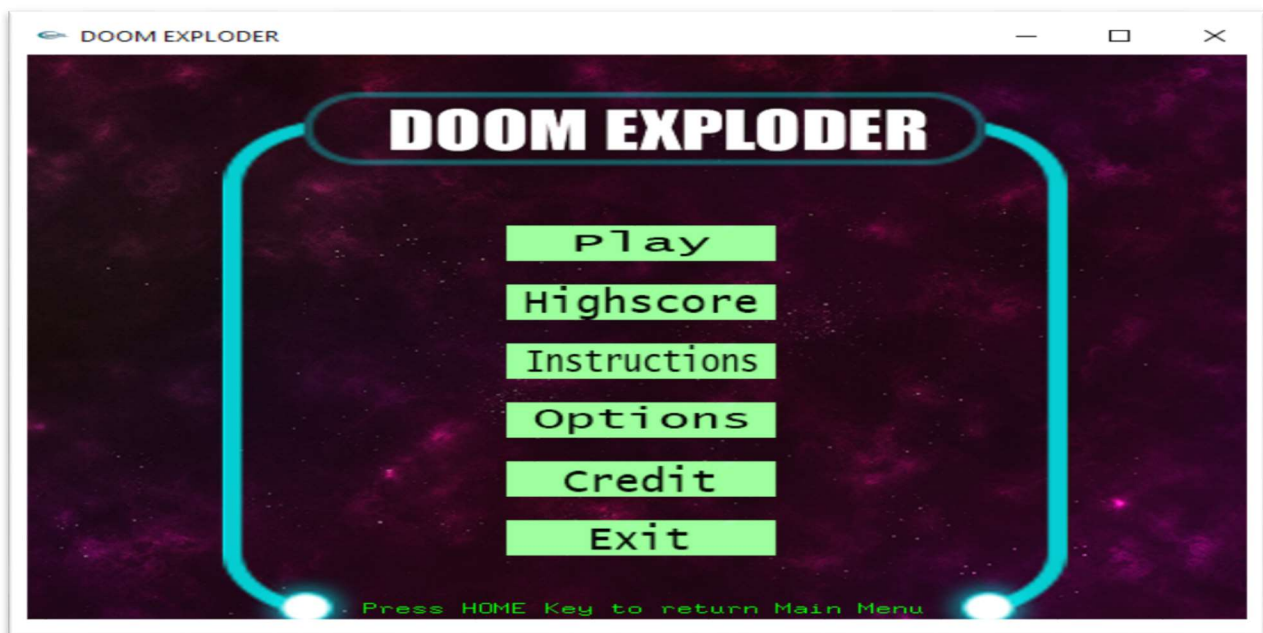

Figure 1: Functionalities of the game in Main menu

Spaceship Life Bar: It will decrease by the hit of astoroids

Figure 2: Scenario of Level 1

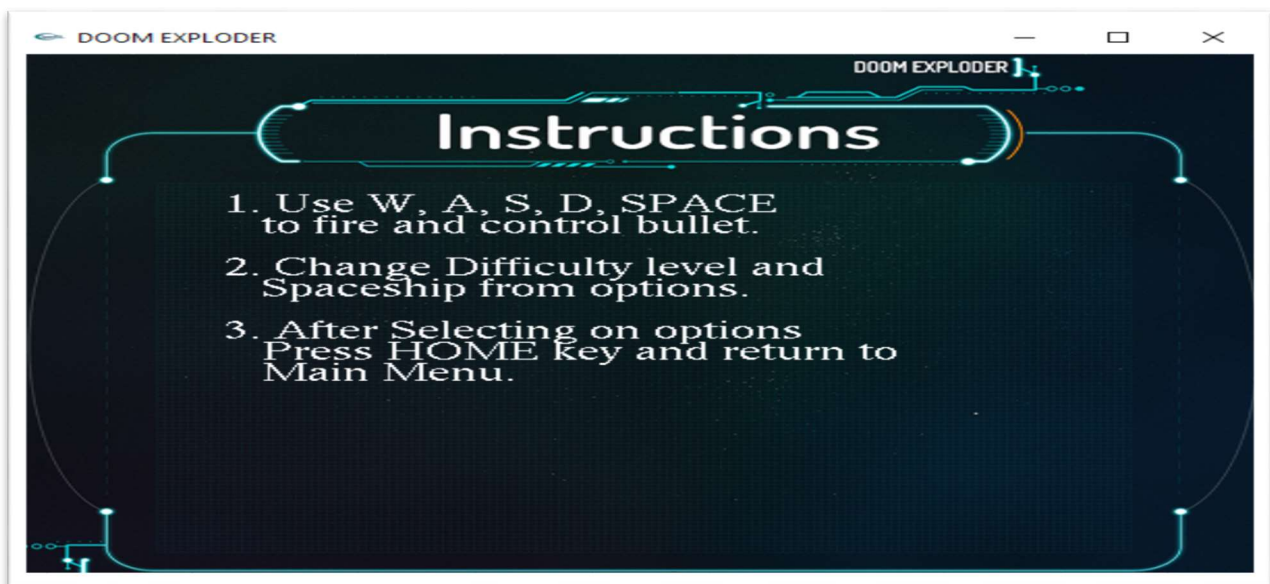

Figure 3: Instructions to play this game

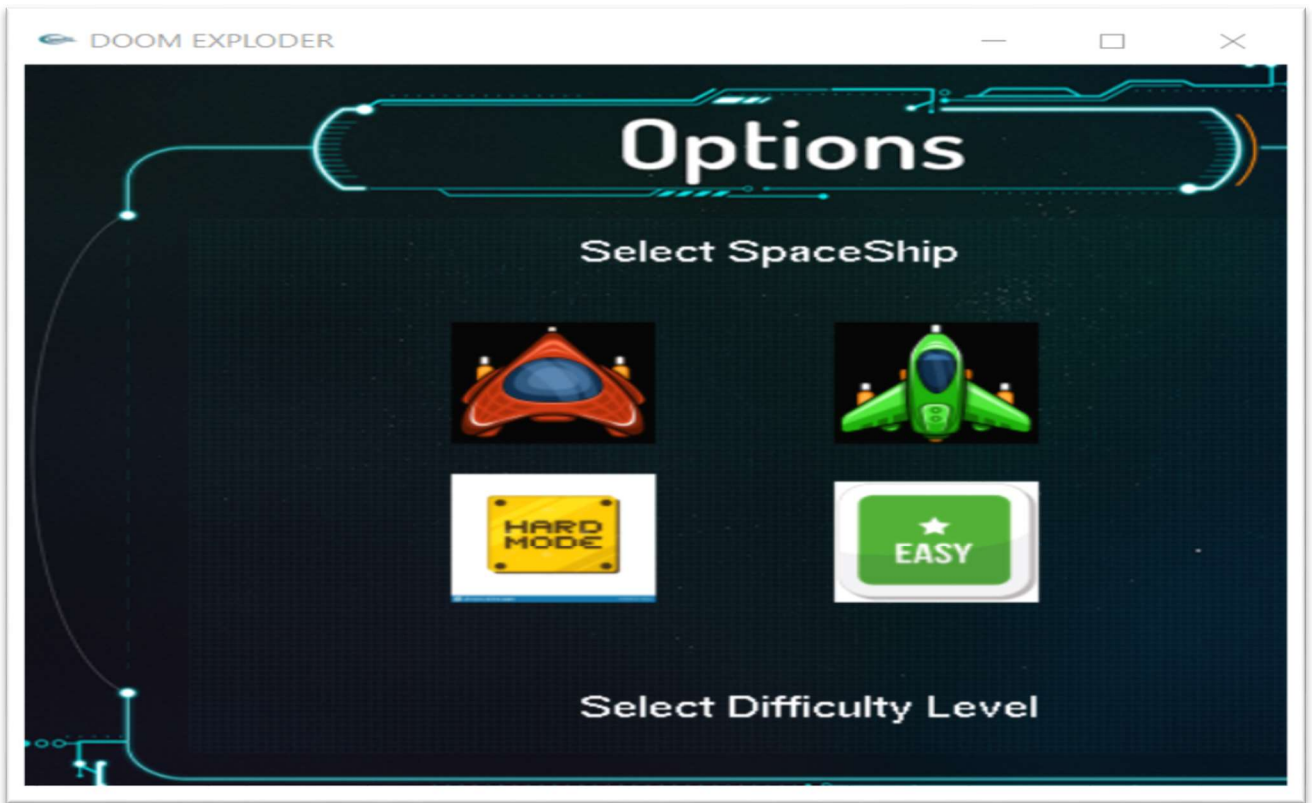

Figure 4: Player can chose difficulty level

Figure 5: Scenario of Level 2

FUTURE WORK:

1. **New Feature:** We will add three more level with all new design of spaceship and asteroids and dynamic main spaceship. We will also bring new movement mechanism of asteroids.
2. **Improved Graphics:** Improve game background and character image. Add more detailed textures, special effect and animations.
3. **Better Performance:** We will optimize the game's performance by reducing load time and improving frame rates.
4. **Integration with Other Service:** Integrate the game with social media and cloud gaming server.
5. **User Feedback:** Add a user feedback section for taking user experiences and demands.

SOCIAL & ECONOMICAL IMPACT:

1. Social Impact:

1.1 Positive:

- i. **Education & Pleasure:** This game can be an effective tool for teaching new skills and knowledge, particularly in areas such as math, science and history by giving pleasure to the user.
- ii. **Social Connectivity:** Multiplayer section of the game can provide an opportunity for players to interact and build relationships with others for socialization and community building.

1.2 Negative:

- i. **Addiction & Aggression:** Some players may become addicted to playing games which can lead to neglecting work or personal relationships and promote violent and aggressive behavior.
- ii. **Isolation:** Spending excessive amounts of time can lead to social isolation and reduce face to face interaction.

2. Economic Impact:

2.1. Direct:

- i. **Job Creation:** The development and distribution of games can create new jobs in areas such as programming, design, marketing and support.
- ii. **Revenue Generation:** Games can generate significant revenue through sales, subscription and in game purchases.
- iii. **Entrepreneurship:** The development of new games can stimulate entrepreneurship and innovation in the gaming industry.

2.2 Indirect:

- i. **Consumer Spending:** The sale of games and related merchandise can stimulate consumer spending, which can have a positive impact on the broader economy.
- ii. **Skill Development:** The development of skills and knowledge in areas such as programming and design can have a positive impact on the job market and the economy.
- iii. **Tourism:** Games that are set in a particular location or that have a strong cultural connection can attract tourists and stimulate local economies.

CONCLUSION:

We started our game development project inspired by Gunship Strike Shooting game and finally completed our journey. We faced various challenges during the whole development period and we learned many programming skills from the experience. And specially trained about how to do a project as a team and what the team work is. We hope that all the knowledge and experiences that we gain from this project will help us in near future in our career and academic life. And this project is successful only for our CSE1200 course teacher's better instructions.
